

Figure 1 displays five sets of plots (11-15) showing the relationship between film thickness and light intensity profiles. Each set consists of two graphs: Film Thickness vs. Position (left) and Light Intensity vs. Position (right).

- Case 11:** Film thickness is constant at high levels with three narrow dips. Light intensity shows three distinct peaks.
- Case 12:** Film thickness is constant at high levels with three trapezoidal dips. Light intensity shows three distinct peaks.
- Case 13:** Film thickness is constant at high levels with three trapezoidal dips of increasing width. Light intensity shows three distinct peaks.
- Case 14:** Film thickness is high at the edges and has a single central peak. Light intensity shows two peaks with a central dip.
- Case 15:** Film thickness is high at the edges and has a single central peak. Light intensity shows two peaks with a central dip.
